p5.js	C++, Java	Git, Github, Gitlab
Typescript	PHPUnit	
Bootstrap	Copilot	Docker
Sass		

LANGUAGES

English	
German	
Romanian	

PROFILE

I am a creative Web Developer with an artistic background and two years of work experience in software engineering. With great attention to detail, I combine aesthetics with practicality in my daily work. My artistic background offered me a well-developed taste for harmony and aesthetics, and my experience as a software developer allowed me to put these skills into practice logically and well-structured. I am always enthusiastic about creating new features, having their usability in mind, and making the user's interaction with a product easier, clearer, and pleasant in every way.

WORK EXPERIENCE

Junior Software Developer

Sportradar Media Services GmbH, Vienna, AT 2023 - Present

- Working mainly with HTML, CSS, PHP, Laravel, JavaScript, VueJS, TypeScript, and MySQL.
- Implementing and partially designing new visual elements.
- Building new features for various sports websites for multiple clients.
- Developing frontend features for video and streaming platforms, as well as continuously improving a complex content management system (CMS).
- Getting familiar with some AWS features.
- Maintaining and improving a complex Rest API.
- Maintaining, creating, and improving visual elements and styling with Sass, SCSS, and CSS.
- Always keeping track of the latest technologies and framework versions.
- Getting familiar with AI Tools (Copilot).
- Turning Figma designs into website features.
- Participating in many workshops about how to better design a new product feature by building wireframes, and creating user flows, user stories, and scenarios.

Intern Development Coding Academy

Sportradar Media Services GmbH, Vienna, AT 2022

- Improved and polished important web development and web design skills.
- Completed many challenges in a team or alone (regarding OOP concepts, refactoring, unit testing, APIs, clean code, code katas, etc.).
- Designed and implemented a simple sports event calendar with functionalities like adding or removing events, with their data.
- Built a simple API from scratch and learned how to test the endpoints with Postman.
- Achieved new knowledge through theory sessions.
- Code pairing sessions.
- Learned how to build a clean structure before developing a new feature by building wireframes and user flows.
